## Inventory of games and their parameters

All unique populated public structured game records, deduplicated by gameId. Categories are actually extracted selections; type/tags are the operator's original classification fields, including confirmed internal promo labels with applicable conditions. `rtp` is the operator's original field; 0 and values greater than 100, up to 988.51, are recorded. The theoretical RTP of the game is treated as a separate game parameter. `playerCount` and places/limits/jackpots are dynamic indicators at the time of the recorded EN/EUR view. "demoDisabled=True" refers to the card data; `prerelease=True` is a preliminary release; `bonusNotAllowed=True` means bonuses are prohibited in the card; empty fields preserve the format of the original card. In each record, ID of the game and ID of the provider are identifiers of public game cards belonging to the games catalog.
