Crypto payment and in-service transfer

Parameter	Meaning
Asset	USDT is the primary asset of the crypto payment PL-C-01; Bitcoin / BTC is kept as a separate route with an expert minimum of 40 PLN.
Network	TRON / TRC20 for a USDT deposit. Bitcoin uses its own network; ERC20 and other networks are highlighted as separate routes when a direction is available at the cash desk.
Method of movement	A blockchain transfer from the wallet owner to the cashier address has been confirmed in PL-C-01. Transfers between players are prohibited under §1.8 of the account terms.
Address or Pay ID	The payment address is generated in a specific Crypto card after selecting USDT / TRC20. Pay ID of the internal service does not apply to this network branch.
Need a memo/tag	In the confirmed scenario USDT TRC20, an address without a memo is used. If the form for another asset shows a memo/tag, this detail must be verified before sending.
Network support by the recipient	Sender and recipient compatibility is determined by the matching of asset USDT and TRC20 on both sides. The cash desk creates an address for the selected pair.
Number of confirmations	Threshold of the verified branch — 19 confirmations after enabling the transfer to the network.
Moment of sending to the network	On the confirmed scale, PL-C-01 sends 16:10:00 CET, separate from PL-D-01.
TXID	The public TXID belongs to the actual network record TRON; for verification of PL-C-01, the amount 35 USDT, the network, and status labels in the verified chain were used.
Internal translation identifier	PL-C-01 — identifier of the verified cash desk episode. Internal transfer between players was not used.
Amount after network fee	35 USDT in the transfer when collecting above the amount of 0,8 USDT; a total of 35,8 USDT was debited from the wallet.
Status at the operator	Sequence of the confirmed cashier scenario — pending until the required confirmations are collected, then credited at 133,00 PLN at the confirmed quote.
Payment transfer status	External scenario sequence — submitted to the network, included in a block, reached 19 confirmations.
Refund for unsupported network	When routed to an unsupported network, §2.8 states that recovery is considered only for amounts above 5 000 EUR with a fee of 0,1 BTC; recovery is not guaranteed.

Cryptocurrency transaction limits

The limit of one confirmed request PL-C-01 equals 1 000 PLN in equivalent. The sent 35 USDT at a rate of 3,80 PLN per USDT give 133,00 PLN. The CET scale for this confirmed scenario starts at 16:10:00. The nineteenth confirmation is recorded in 16:12:06, the status credited — in 16:12:16, the full interval 2 min 16 s. If such a route is permitted by the terms of the first welcome, 133,00 PLN cover the threshold 80 PLN with a margin of 53,00 PLN. PL-C-01 describes the movement of money. The bonus accrual is calculated in a separate entry PL-WELCOME-01.

To verify the boundaries of a confirmed crypto payout, the general minimum 50 EUR applies unless the method has a special condition. The equivalent of 220,45 PLN is taken at the reference rate 4,4089 PLN/EUR, rounded up to the cent. For 3,80 PLN/USDT, the lower bound is 58,02 USDT, rounded up to hundredths. With a verified single-request

limit of 500 PLN, the upper bound is 131,57 USDT, rounded down to hundredths. The payout method and network are selected on the withdrawal card. The input data determine TRC20 for a USDT deposit; for a USDT withdrawal, the network is confirmed by the card of the selected direction. This calculation shows the amount interval based on the accepted rates and limits.

Cryptocurrencies: description and operator instructions

Operator statement, English material from 19.11.2026; information verified by expert review.

WHY YOU NEED CRYPTOCURRENCIES

It's a new generation of online payments. Fast transactions with low fees can be sent to any part of the world. The convenience of this market makes understanding complicated cryptocurrency concepts more worthwhile.

Security and money That is always traceable

All cryptocurrency transactions are based on a blockchain. A blockchain is like an open ledger where everyone can check all transaction history but cannot make any changes. Blockchain technology is becoming popular now because of its security, with many governments using it precisely for this purpose.

PROTECTION OF YOUR DATA

Terms of KYC are always available in their FAQs section. You can also choose your preferred exchange.

Low Fees

You need to pay a small fee to the network for the confirmation of your transaction. You can speed up your transaction by paying an extra fee.

International transactions

The transaction will be sent in less than an hour depending on the load on the cryptocurrency network, which contrasts with international bank transfers that can take more than a week.

DECENTRALISATION

Cryptocurrency is an open-source product with a big community of enthusiasts that helps in its development and more. Since no one actually owns the cryptocurrency blockchain network, your account or wallet cannot be banned.

How to Play on BetOnRed with Cryptocurrencies

Choose your wallet

Choose where you want to store your cryptocurrency. You can do this via online wallets, hardware wallets (cold wallets), or store them in your wallet on one of the exchanges.

The most popular online wallets are Blockchain.com, Exodus, and Mycelium. The most popular cold wallets are Trezor and Ledger.

BUY CRYPTOCURRENCY

The first type is just regular exchanges like Binance, Huobi, Coinbase, Kraken, etc.

The second type is p2p exchanges where you can buy/sell cryptocurrencies directly to another person, like on LocalBitcoins.com.

Make a deposit and enjoy the games

When you buy cryptocurrencies, you can deposit them in your BetOnRed account and start to play games. Or you can use cryptocurrency as an investment tool. It is a well-known and fast-growing investment option.

We accept different cryptocurrencies in our casino. You can make a deposit with Ethereum, Litecoin, XRP and Bitcoin Cash.

How to Pay Crypto

Choose a cryptocurrency

In the deposit window, select the cryptocurrency you want to deposit (for example, BTC, ETH, USDT)

Choose a network

For USDT tokens, choose the correct network (ERC20, TRC20, BEP20) that matches your external wallet or exchange

Enter the deposit amount

On the first step, enter the amount you want to deposit. You will immediately see what bonus is available for this amount

Click Continue

After selecting the cryptocurrency and network, click the Continue button. A new window will open with the deposit address and QR code

Copy the deposit address or scan the QR code

Copy the generated deposit address or scan the QR code with your external wallet

Send cryptocurrency from your external wallet to your deposit account

Select the same network used for the «Deposit Address» on your deposit account, and paste it into your external wallet for sending or withdrawing cryptocurrency

Wait for blockchain confirmation

Deposits are credited after the required confirmations

Choose a cryptocurrency and network

In the deposit window, select the cryptocurrency you want to deposit (for example, BTC, ETH, USDT). For USDT tokens, choose the correct network (ERC20, TRC20, BEP20) that matches your external wallet or exchange.

- 1Min dep is {minDeposit} {currency}1 Deposits under this limit can't be processed or returned
- Send only {currency} {network} coins to this address
- Exchange rate may vary – final amount can differ slightly
- After sending the coin you can close this window

Withdrawal attention. Ensure you select the correct cryptocurrency and network for your wallet before sending coins

Confirmation count. This is your private depositing address. Any transactions you make to this address will be shown in your balance after {confirmations}

The values minDeposit, confirmations, network, amount in the template are parameterized. The minimums in EUR/PLN/CZK and the actual transfer are confirmed for the corresponding operation parameters.

Crypto cash desk — Main parameters

Parameter	Meaning
Availability of crypto payments	The Polish cashier, per the expert list, includes crypto assets. The threshold and direction are set by the selected card, and withdrawal goes through KYC and the rules of the original method.
Assets and networks	For Polish top-ups there is USDT/TRC20 with a minimum of 25 PLN and Bitcoin with a minimum of 40 PLN. The withdrawal list includes USDT and Bitcoin; the payout network is determined by the destination card.
Deposit networks	Polish deposit USDT — TRON/TRC20. For Bitcoin, its cashier route is used. Example USDT ERC20 in total FAQ shows the principle of matching the network and the address.
Output networks	When withdrawing USDT, the network is indicated by the request card. The presence of the expert method USDT during withdrawal does not automatically transfer TRC20 from the deposit profile.
Min. deposit	25 PLN equivalent for USDT/TRC20 and 40 PLN for Bitcoin in the Polish profile.
Max deposit	In the verified transaction PL-C-01, for a single request the applicable upper limit of 1 000 PLN equivalent was accepted. 35 USDT × 3,80 = 133,00 PLN is below it. The cashier maximum is determined by the asset, the network and the profile limit.
Min. withdrawal	The reference general minimum §2.1 is the equivalent of 50 EUR in the absence of a special condition. With two reference confirmed rates, 220,45 PLN corresponds to a minimum of 58,02 USDT with rounding up. The payment method may set a separate threshold.
Max. withdrawal	In the verified crypto payout, a cap of 500 PLN is applied to the equivalent of a one-time request, and at 3,80 PLN/USDT this is 131,57 USDT after rounding down. The operator's conditions depend on the asset, method, and profile limit.
Commissions	In the verified transaction PL-C-01, the operator fee 0 USDT. The confirmed external network fee 0,8 USDT is charged on top of 35 USDT of the transfer. Total expense 35,8 USDT.
Confirmations and enrollment	In the verified episode PL-C-01, 19 confirmations are required. From submission in 16:10:00 CET to crediting, 2 min 16 s pass. The actual confirmation threshold depends on the selected asset, network, and cashier route.
Conversion	Confirmed quote PL-C-01 — 3,80 PLN per 1 USDT at the time the request was formed. Credited equivalent 35 × 3,80 = 133,00 PLN.
Address requirements	The address is obtained in the Crypto card for the selected pair USDT/TRC20. The calculation uses the address without a memo, and if the form for another direction requires a tag or memo, this attribute is specified separately.

Crypto checkout — Additional parameters

Parameter	Meaning
Bonus eligibility	In the first welcome on 80 PLN, the threshold is checked against the credited amount. If the cashier allows the selected pair for the promotion, the confirmed 133,00 PLN in PL-C-01 exceed the threshold by 53,00 PLN. The application of the bonus itself is considered separately in PL-WELCOME-01.
